

Evergreen Aviation Technologies Corporation

Biodiversity and Zero Deforestation Commitment

Evergreen Aviation Technologies Corporation recognizes natural capital as the essential foundation for sustainable corporate growth. In response to the *Kunming–Montreal Global Biodiversity Framework*, we commit that, while developing aircraft maintenance and parts manufacturing businesses, through the implementation of the *Sustainable Development Practice Code*, *Environmental and Energy Policy*, *Sustainable Supply Chain Policy*, and *Supplier Code of Conduct*, we actively engage with stakeholders, strive to reduce negative impacts on the natural environment, and move toward the goal of “Net Positive Impact.”

Specifically, we commit to:

1. To conduct risk assessments based on dependencies and impacts to ensure that our operations and value-chain activities are not located within or adjacent to key nature conservation areas or biodiversity-sensitive areas. When impacts on natural ecosystems are unavoidable, we will adopt the mitigation hierarchy (avoidance, reduction, restoration, and offsetting) to protect biodiversity and achieve no net loss.
2. To ensure that our operations and value-chain activities do not contribute to forest destruction through burning or logging, and to achieve zero deforestation across all activities by 2050.
3. To prohibit our operations and value chains from engaging in illegal development or operating activities within primary forests (as defined at global or national levels), High Conservation Value (HCV) areas, and wetlands.
4. To ensure that our products, services, and food ingredients do not utilize species listed on the International Union for Conservation of Nature (IUCN) Red List of Threatened Species or those protected under national regulations.
5. To conserve forests and High Conservation Value areas by procuring internationally recognized sustainable forestry products from compliant suppliers. Where information is available, we refrain from sourcing products from any suppliers directly or potentially involved in deforestation.
6. To support the advancement of sustainable agriculture and forestry, promote biodiversity, and participate in tree planting, afforestation, or the restoration of natural ecosystems.

Evergreen Aviation Technologies Corporation
Biodiversity and Zero Deforestation Commitment

Through robust environmental management and sustainable supplier engagement, Evergreen Aviation Technologies will ensure that all operating sites and suppliers comply with regulatory requirements, striving for the full and effective implementation of this policy.
