

Evergreen Aviation Technologies Corporation

Environmental and Energy Policy

Evergreen Aviation Technologies Corp. is committed to providing high-quality manufacturing and maintenance services to the aviation industry. Upholding the Evergreen Group's core values of "Challenge, Innovation, and Teamwork," the company has progressively introduced various quality management systems and pollution prevention equipment. It is also committed to achieving net-zero carbon emissions by 2050, aiming to foster a corporate culture of zero pollution, energy conservation, carbon reduction, and environmental sustainability.

We recognize that environmental protection and energy conservation with carbon reduction are not only corporate responsibilities but also essential to safeguarding our employees. Therefore, we are committed to establishing control and improvement targets for waste, wastewater, emissions, noise, energy consumption, and air pollution generated throughout our maintenance services, product manufacturing processes, and across the entire value chain—including suppliers, transportation, warehousing, and other business partners. Through effective management programs, we continuously improve our environmental and carbon reduction performance, including during mergers, acquisitions, and due diligence processes. We comply with all applicable environmental regulations and promote ecological conservation, biodiversity, and zero deforestation. We encourage all employees and partners to actively implement sustainability practices, aiming to enhance quality of life and leave a cleaner planet for future generations.

To fulfill the above commitments, Evergreen Aviation Technologies Corp. will implement the following policies:

1. Comply with international conventions and environmental regulations, fulfill corporate social responsibility, and continuously carry out improvement initiatives to protect the environment and quality of life.
2. Adopt appropriate pollution prevention technologies and equipment to reduce energy consumption and minimize environmental impacts, supporting the sustainable development of a green planet.

Evergreen Aviation Technologies Corporation

Environmental and Energy Policy

3. Implement environmental protection measures by increasing the use of recycled resources, properly managing waste, and promoting recycling, packaging reuse, and green procurement to reduce environmental impact.
4. Promote environmental awareness among employees, suppliers, and contractors through education and communication, working together to protect and cherish the Earth.

We have established effective communication channels to respond to environmental concerns raised by stakeholders. Through the implementation of environmental and energy education and training, we aim to ensure that all employees understand the environmental impacts of our operations and their roles. We encourage employees to actively practice environmental protection and energy management in their daily work, fulfilling their responsibilities as global citizens. By continuously improving environmental and energy management performance, we lay a solid foundation for the Company's sustainable development.
